

# ECE 452 Demo 2: Restaurant Automation - Codename Adam

**Date:** April 23, 2019

---

**Team Members:** Seerat Aziz, Lieyang Chen, Christopher Gordon, Alex Gu, Yuwei Jin, Christopher Lombardi, Arushi Tandon, Taras Tysovskiy, Hongpeng Zhang

# Mission

- At CODENAME ADAM, we work to save the world, one restaurant at a time.
  - **Save Time:** Make placing and fulfilling orders easier using our Customer/Table mobile applications and website. Save more time for things that matter.
  - **Save Money:** With our streamlined Chef and Waiter mobile applications, business owners can hire less staff and help ease the workload of the employees.
  - **Save the Planet:** Eliminate traditional menus and reduce paper waste.

# Features

- **Portable Mobile Applications:** Dedicated mobile applications for chef, waiter, customer, and table that streamline the ordering process for a smooth dining experience
- **Facial Recognition Account System:** Skip the login process with automatic facial recognition to seamlessly load your favorite dishes and enable the recommendation system
- **Recommendation System:** Having trouble picking what dishes to order? Based on your past ordering habits and your current preferences, we can recommend some for you!
- **Admin Console:** Easy restaurant management console that allows restaurant owners to see statistics about revenue and trends, and manage menu and prices all in one place
- **Ingredient Prediction System:** See trends in dish popularity and ingredient consumption to reduce costs and maximize revenue

# Demo 2 - Use Cases Implemented

- UC - 1 (Order Food)\*
  - Customer places orders through customer app or website and Chef is notified
- UC- 2 (Suggest)
  - Customer receives meal suggestions based on the order history and quiz results
- UC - 3 (Order Complete)\*
  - Waiter is notified of completed orders
- UC - 4 (Assistance Needed)\*
  - Waiters receive notifications from customers that request assistance
- UC- 5 (Get Queue)
  - Generates a list of current orders for waiter and chef
- UC - 6 (Finish Order)\*
  - Chef notified of completed order once customers receive food

- UC - 7 (View Stats)
  - Displays latest statistics regarding restaurants performance with popular foods and overall growth
- UC - 8 (Predict)
  - Helps view trends in ingredient consumption and dish popularity and receive a prediction on the future consumption and popularity in order to make informed decisions on the management of the restaurant.
- UC - 11 (Recognize)
  - Makes customer login via facial recognition

\*Demo 1 Use Cases

# Algorithms & Technology Stack Used

- Restaurant Website (EJS, HTML5UP Templates, Node.js)
- Android Applications (Java/Android Studio)
- Web Server (Node.js)
- Database (AWS MongoDB)
- Firebase for Push Notifications
- Ingredient Prediction System (Python - pandas/statsmodels)
- Recommendation System (Python - numpy)
- Face Recognition System (free, offline third-party sdk from ArcSoft®)
